A new breed of pet technology.

Pet Stop is the only company to combine the depth of knowledge, commitment to technology, and genuine love of pets to produce the finest, most reliable pet containment system you can find. Our system is so superior, it's fully guaranteed to work for any pet – any breed of dog or cat – outside or inside your home.

At the heart of our system is the smallest, lightest, fully customizable collar on the market.

Our UltraElite Receiver® was developed by the most experienced engineer in the business – a man who holds more pet containment patents than all other engineers in the industry.

Comfort Contacts®

Flash Alert® –
Low Battery Light

Our system includes numerous features that have helped to build the Pet Stop reputation as the “pet-friendly” choice.

Pets are smart. We're smarter.

Many of the innovations built into the Pet Stop UltraElite Receiver® were originally conceived by some of the best minds in the industry – persistent and ingenious dogs. You'll find a few more true stories that led to our system improvements at our web site www.petstop.com.

(Landsdale, Pennsylvania)

Many pet containment collars are designed with an antenna that picks up the signal only when dangling under the dog's neck. An astute terrier soon learned that sliding the receiver around to the side of her neck and holding her head upright caused the system to fail every time. With the collar askew and head held high, she could come and go as she pleased.

.....
So we developed...

TriScann® Omni-Directional Antenna

This ingenious omni-directional three antenna system ensures that the receiver never fails to find the signal, no matter what position the receiver is in.

We know pets – inside and out.

A common misconception about pet containment systems is that they are only for the yard outdoors. Pet Stop brings the benefits of this technology indoors, too. Want to keep Rex out of the baby's room or Kitty off of the kitchen table? No problem. Pet Stop can help you end wild romps on the expensive furniture in the living room. Our indoor transmitter has all of the customization of the outdoor unit and looks great on a shelf or table.

Our promise to you.

Pet Stop products are the most reliable you'll find anywhere. Our dealers are the most professional and responsive in the business. But don't take it from us. Take it from our guarantee – the most ambitious promise in the industry. Call our representative on back or visit our web site to get the whole story.
